

# Beaded Dragonflies!

## Need:

- 153 seed beads  
(38 per wing, 1 for tip of tail)
- 14 tubular beads
- 1 diamond bead
- 1 flat round bead
- ≈ 18" 26 gauge wire

Run wire through 10 tubular beads, leaving a 2" tail at one end. Loop wire through a seed bead, then back through all 10 tubular beads. This forms the "tail".

Twist the two pieces of wire around each other a couple of times, then run the longer piece through a tubular bead, 38 seed beads, and back through the tubular bead. Shape into a wing shape, then twist the wire around the tail wire once and form a second wing as above. Twist the wires a few more times, then form 2 more wings.

Twist the wires once, then run the long end through the diamond bead, through the flat round bead, and back through the diamond bead. Loop the long wire around the "body" once, then twist with the other wire a few times. Done!
